Gemini glass can be mixed and matched with any wall tile in this brochure.

It is recommended that all Gemini glass borders be fixed onto solid bed using appropriate adhesives.
PLEASE NOTE! The above tiles must be fixed with a Solid Bed Adhesive, with the plastic side facing out.
Please allow the adhesives to harden before removing the plastic film.

gemini natural product tiling with natural stone

Gemini offer a wide range of natural stone products. Their beauty and versatility has made them an increasingly popular choice. We offer the following guidance towards the successful choice and installation of natural stone materials.

Types of Natural Stone available: Granite • Slate • Travertine • Polished Marble • Limestone

Selection of Stone and General Fixing Guidance

Before purchasing your stone, please check that it is suitable for the application you wish to use it for.

Ensure that the walls and floors are structurally sound and are able to support the weight of the natural stone and its adhesive bed.

Surfaces must be clean, dry, sound and free of contamination.

Wet areas such as showers should be tanked with BAL WP1 Shower Kit or Tanking System prior to tiling.

All Natural stone has a varying degree of porosity, it is advisable to seal the tiles with the appropriate LITHOFIN product PRIOR TO GROUTING this will protect the stone from staining during the installation.

Use the solid bed fixing method, incorporating an appropriate notched trowel and fill any voids in the back of the tile prior to applying the tile to the adhesive bed..

Assuming the wall is structurally sound, it is advisable when fixing to skimmed plaster or gypsum plasterboard that the wall is primed prior to tiling with BAL APD PRIMER. Ideally fix natural stone with a rapid setting cement based adhesive. Due to the porosity of certain stones, staining can occur if a normal setting adhesive is used.

White adhesive should always be used with pale stones and when using a light coloured grout. Either BAL RAPID SET WHITE OR BAL RAPID SET FLEXIBLE can be considered as suitable adhesives for most backgrounds on floors and walls.

It is advisable that BAL FAST FLEX is used for overlaid timber floors.

Assuming the tiles have been suitably protected, then grouting of stone can be done in the same way as any other tile.

Standard cement based or polymer modified grouts, BAL WIDE JOINT GROUT, BAL SUPERFLEX, BAL MICROFLEX, or BAL MICROCOLOUR can all be used,

To avoid damaging the surface finish of the tile, care should be taken not to use any abrasive or corrosive substances. It is advisable to check to see which is most appropriate for your application.

Ensure that any grout residue is removed from the surface before washing the tiles with the manufacturers recommended solution of LITHOFIN POWER CLEAN. Further sealing maybe required after grouting to achieve the desired finish to the installation, it should be noted that the use of sealants may change the final look of any natural stone and it is advisable to do a small sample test before completing the whole installation.

In order to maintain your natural stone tiles it is important to use the correct cleaning solutions, products with a detergent, abrasive or acidic content should be avoided. Worlds End Tiles would be pleased to advise suitable products specific to your installation.

When installing natural stone we recommend using a professional tile fixer.

gemi natural product natural stone

Other types of Natural Stones are available in the Gemini range. Please contact your nearest supplier for more information.

Granite

Granite is an igneous rock and widely occurring. Granite consists of different minerals one of which is quartz. The quartz content is the more aesthetically pleasing mineral. Granite is known for its hardness and is a very suitable wall and flooring material. There are many types of granite some are listed below.

Absolute Black • Star galaxy • Blue Pearl • Baltic Brown • Kashmir White • Giallo Veneziano

Limestone

Limestone is a sedimentary rock composed largely of calcium carbonate. The primary source of the calcium carbonate in limestone is most commonly marine organisms. Many types of Limestone are available in tile format. Only a small amount are listed .

Moleanos • Jerusalem stone • Jura • Moca Crème • Rosa Aurora • Beauvillon • Olympus

Travertine

Travertine is a banded, compact variety of limestone formed along streams, particularly where there are waterfalls and around hot or cold springs. Calcium carbonate is deposited where evaporation of the water leaves a solution that is super saturated with chemical constituents of calcite.

Travertine unfilled (colours vary) • Travertine Filled & Honed (colours vary) • Travertine Brushed Travertine Chiselled edge

Marble

Marble is metamorphosed limestone, composed of very pure calcium carbonate. Marble is most commonly known in its polished format. Some types of Marble are,

Bianco Carrara • Botticino Classico • Botticino Fiorito • Calacatta • Crema Marfil • Rosa Perlino Statuario • Nero Marquina • Verde Alpi

Slate

Slate is a fine grained homogeneous sedimentary rock composed of clay or volcanic ash which has been metamorphosed so as to develop a high degree of slaty cleavage or undulation. Slate comes from many parts of the world. Listed below are some countries of origin,

Brazil • China • India • Wales

bal adhesives & grouts

BAL is the chosen brand of professional tile fixers, contractors and architects. They offer a wide range of products developed for specific applications.

Market leading ready-mixed & polymer modified adhesives together with primers / additives and silicone sealants constitute the remainder of BAL's comprehensive offer of tiling solutions.

Mosaic-Fix

Fix all types of mosaic tiles including glass to walls and floor easily with mosaic-fix, it is a water resistant tile adhesive formulated for interior and exterior use.

Pro-Hygiene Systems

Where hygiene is important in areas such as bathrooms, showers and kitchens, choose a product from the unique BAL Pro-Hygiene Systems range of grouts, sealants and cleaners with microban antibacterial protection to inhibit the growth of bacteria and black mould.

devi underfloor heating

devimat™ underfloor heating provides a simple yet affordable way to experience comfortable warm floors in your home all year round, adding the perfect finishing touch to any tiled floor.

Why devimat™?

- Comfortable warm floors - frees up wall space allowing ultimate design freedom.
- Quick and simple to install - devimat's™ twin conductor cable, combined with ultra-strong adhesion allows a quick installation time and reduced cost. Simply roll out the mat then cut and turn it to fit the free floor area. The mat will stick firmly to the floor surface, with no need to return a second tail back to the thermostat.
- The highly robust, ultra-thin mat can be laid straight onto the existing floor with no special primers required.
- 100% safe for installation in wet areas and wet rooms - devimat™ has a complete 100% aluminum earth sheath and is fully compliant with current earthing requirements for installation in wet areas.
- Economical - costs approx 0.6p per hour/per m² to run.
- DEVI is the world's leading manufacturer and provides complete technical back-up and support, along with a full ten-year manufacturer's warranty.

The system is controlled via devireg™ 550 programmable thermostat with built-in timer, creating a system which is energy efficient with running costs much lower than you may expect.

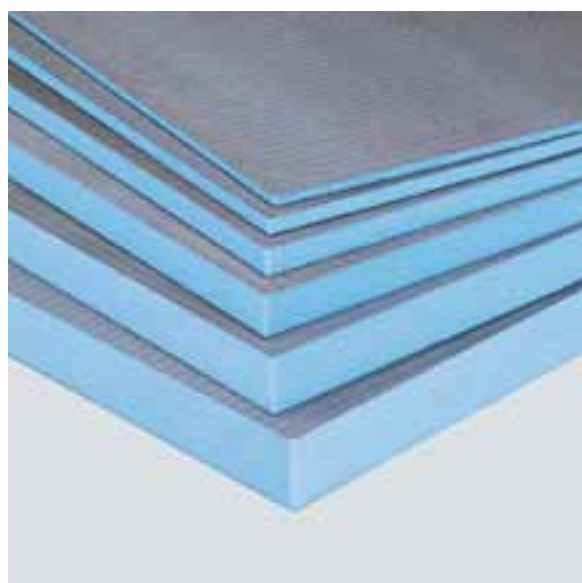

wedi tilebacker board

The most important feature of wedi Tilebacker Board is its performance in wet conditions. Use it for showers or wet rooms with total confidence.

Thanks to the unique composition of the product, tiles stay attached to Tilebacker, lightweight, easy to cut and dimensionally stable. It is supplied in a variety of thicknesses.

This is more than a surface for tiling onto - it is a construction material that opens up a wealth of creative possibilities on tight budgets. When used to level uneven walls, it delivers the finished job much faster than rendering or plastering and it keeps dust to a minimum even when drilling.

**rubi
tools**

RUBI TOOLS – RUBI EQUIPMENT – RUBI NET

Half a century of experience, a well known International brand, a complete range of products and a great professional team based in the UK are the elements that make Rubi an important part of the tiling industry.

RUBI - THE CUTTING EDGE OF TECHNOLOGY

The Rubi production process for the manufacturing of tools for the building industry is undoubtedly one of the best in the world. Rubi takes care to control quality at every stage in the production of their machines and tools. We use only the very best steels, and that is why the Rubi brand is the only one in the world which guarantees our professional manual cutters for three years and our electrical cutters for one year against all manufacturing defects. Our after sales service ensures that spare parts can be supplied to our customers around the world quickly.

RUBI CLUB MEMBERSHIP

Club Rubi is the first club of its kind for the construction professional which will keep you ahead of the competition. Membership is free and as a member you will be kept up to date on all new products and promotions. Join today and enjoy the benefits immediately

An International brand, the highest quality production techniques and Club Rubi to keep you ahead of your rivals. No matter how large or small the task, Rubi can be relied upon not to let you down.

gemini guidelines

Rectified.

Rectified tiles have their edges mechanically squared to emulate real marble. Great care must be taken when fixing to ensure tiles are fixed flat and not lipped.

We would strongly recommend the use of a professional tiling contractor.

Shade variation.

It is common practise to check batch numbers on wallpaper. Please apply the same care before fixing ceramic tiles. Shade variation is an inherent feature of some ceramics and it is therefore imperative that you visually check blends prior to fixing. Care should be taken to ensure that sufficient tiles are purchased within the same batch to complete the job, as no claims for variations or quality can be entertained after fixing.

Tiles.

The following classifications are given for guidance purposes only.

Wall tile

Floor tile

Porcelain tile

Polished Porcelain tile

Glazed Porcelain tile

Glass tile

Rectified tile

Natural Product - See tiling with natural stone on page 121

Residential "bare foot" traffic.

Internal residential kitchens and hallways.

Kitchens and hallways with external access.

Areas with heavy pedestrian use over sustained periods but not necessarily commercial applications.

Denotes frost resistant - Suitable for outdoor

We would recommend the use of a door mat within a mat well to all external doors.

F.B.P full bodied Porcelain falls outside the PEI wear rating categories and is considered suitable for all domestic and most commercial applications. Porcelain tiles should be fixed with specialist cement based adhesive, consult your fixer or retailer for specific applications. Porcelain tiles can be extremely difficult to drill through when fixing accessories. Specialist drill bits will be required. Frost resistant floor tiles fixed outdoors must be fixed with a solid bed of adhesive to protect against frost damage.

Tiling to timber floors requires particular attention. Please discuss your specific requirements with your supplier prior to fixing. Co-ordinating floor tiles are made using differing glazes to the corresponding wall tile and will be different in appearance. Please check acceptability prior to fixing.

Crazing. Glazed tiles cannot be guaranteed against crazing.

Glass and Metal Tiles.

Glass and metal tiles featured within this brochure will require differing fixing procedures. You must ensure that these surfaces are protected prior to grouting. Clean tiles with a neutral detergent and soft cloth; never use abrasives which may result in unsightly scratches.
